

WUM-CDC-WLG

Advanced Wireless IIoT Gateway and Data Concentrator
for Smart Metering and Management Systems

WUM (Wireless Universal Multi-Mesh) Gateway and Data Concentrator is a multifunctional wireless device for collecting, storing, and transmitting data.

Wi-Fi Mesh technology integrates wired and wireless networks into a unified system, providing reliable communication between meters, controllers, and central hubs.

connects
up to 64 meters

communication technology
Wi-Fi Mesh, LoRa Mesh,
GSM/LTE

integration with
various devices

remote management
& configuration

secure data
transmission & storage

flexible operation
& power supply

The **WUM** gateway and data concentrator can integrate various types of meters, as well as other controllers, modules, and devices from different manufacturers.

SPECIFICATIONS

MULTI-MESH ARCHITECTURE

Integrates wired (RS-485) and wireless nodes (Wi-Fi Mesh, LoRa Mesh, GSM/LTE) into a unified system. Ensures reliable communication between meters, controllers, and gateways, as well as overall network scalability.

DEVICE CONNECTION

Two RS-485 buses can connect up to 32 devices each, supporting up to 64 meters per concentrator.

SUPPORT FOR PULSE INPUTS

Two dry contact ports for pulse reading and connecting additional sensors.

TIME SYNCHRONIZATION

Constant time synchronization with the central system, ensuring the accuracy of primary data collection, processing, and storage.

DATA PROCESSING AND STORAGE

The device creates an hourly archive for each meter and stores data in its internal memory for 30–45 days, including periods of power outage.

SECURITY AND ENCRYPTION

Data transmission is carried out using the AES-256 (Advanced Encryption Standard) algorithm, which prevents unauthorized access.

POWER SUPPLY AND INSTALLATION

Interface for direct power supply from 220 V or 12/24 V source. The compact housing is designed for DIN-rail mounting.

AUTONOMOUS OPERATION

Concentrator keeps accumulated data during power outages.

DATA COLLECTION AND TRANSMISSION

- Support for major communication protocols: DLMS/COSEM, IEC 62056-21, Modbus. Capability to integrate proprietary, yet publicly available protocols.
- WUM Data Concentrators use wired connection via RS-485 for reading data from smart electricity meters and connecting controllers, modules, and various devices.
- LoRa Mesh and Wi-Fi Mesh wireless technologies for data transmission between devices within a single network segment.
- GSM/LTE wireless technologies for transmitting data to the central management system (HES) for further processing, storage, and analysis. In addition to its gateway function, it can also serve as a data concentrator.

DIMENSIONS

Enclosure with	DIN-rail mounting
Dimensions	55 x 68 x 111 mm
Weight including enclosure	120 g

OPERATIONAL CHARACTERISTICS

Operating Temperature	-30...+80 °C
Humidity	up to 92% without condensation

POWER SUPPLY

Voltage	220 V or 12/24 V
Power Consumption	3 W

COMMUNICATION SPECIFICATIONS

Supported Protocols	DLMS/COSEM IEC 62056-21 Modbus
Number of meters connected	up to 64 32 per RS-485 bus

AREAS OF APPLICATION

- ✓ Advanced Metering Systems (AMI) and Automated Commercial Electricity Metering System.
- ✓ SCADA Systems, as an integrated component for operational control and data acquisition.
- ✓ BMS (Building Management Systems) and Smart Home systems, serving as a nodal communication gateway for managed devices and/or a data concentrator for telemetry.
